

Above all...

S 50 XDTJ

ULTIMATE UP-AND-OVER REACH

The ultimate reach

Bronto Skylift introduces the S 50 XDTJ - a brand new medium sized all-rounder. The unit may only be on three axles but it is a real heavyweight performer. Designed as a rental company all-rounder its performance makes it particularly suitable for inner-city sites.

The unique three section super-jib offers unrivalled up-and-over reach unheard of in this height category. With 16 meters of up-and-over at 33 meters height it provides access to previously inaccessible locations over rooftops, vestibules and canopies. It goes without saying that maximum outreach and its 700 kg cage load are top-of-the range for its GVW. The 6x4 rear steer chassis offers incredible manoeuvrability and front axle HydroDrive great traction in bad terrain.

All this comes with the incredible variety of Bronto XDT optional equipment, including 1300 kg boom winch and 360 degrees camera cage. The control system remains the tried and tested Bronto+ - the same as in all Bronto units and legendary for accurate, smooth operation and its remote calibration features.
