

Gerni
- danish cleaning power

value for money
- that's Gerni

G9

- strong machines for heavy-duty tasks
- both electric and fuel driven

The Gerni G9 range - electric driven cold water high-pressure cleaners

The machinery in the G9 series is extreme powerful and is the ideal equipment for special or extremely demanding cleaning tasks, in which pressure, water quantity or both is crucial to the final result.

The choize is yours -

Gerni is with the G9 series introducing a new concept where the costumer has the possibility to build their own machine based on their actual needs.

Pump and motor are fixed in a solid, stable and suitable steel frame, which makes the basic module. To get a complete machine the remaining components is to be chosen – from motor size to length of the high pressure hose – the upshot is an unit, which is a complete equipment to fulfill the users demands for functionality but also economy.

Among the possibilities, we have gathered some combinations based on the most common results and needs. But if these constellations do not comply with your wishes we would like to draw up your combination covering your needs – the choice is yours.

Property, additions and equipment

Every electrical machine is equipped with automatic start/stop function, and is accomplished in a durable, robust and a well-balanced construction, which in combination with a low center of gravity makes it surprisingly easy to force even bigger obstacles during work and transportation.

The machines are equipped with motor/pump units, which can produce a pressure from 140 bar to 250 bar, which can give a pump pressure from 20 to 40 liter a minute. Depending on choices, the machines can be used connected with permanent installations or can be used for several users.

The additional choices are many but still composed of reliable and tested components and include among other things:

Wheels:
- choose between 2 or 4 wheels, massive or rubber wheels
- effective brake system for 4-wheeled machines.

Handle:
- choose between simple, simple with spoiler or with spoiler and cover for optimal protection of the machine.

Pistol:
- the machine is standard equipped with a user friendly EGT pistol with relief function and quick coupling.

High-pressure hose:
- choose the length appropriate for your needs: 10, 15, 20 m or ...

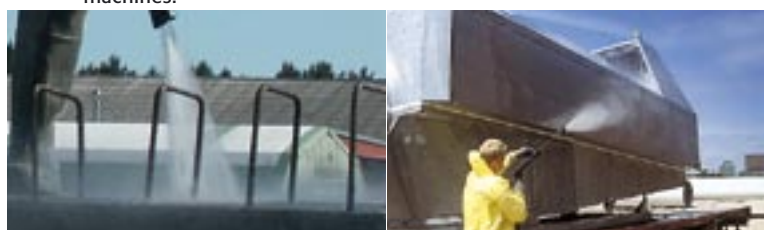

Hose reel:
- a hose reel is an extremely useful accessory, helps an easy handling. Is appropriate mounted at the handling or the spoiler.

Silt and sand filter:
- is recommended for self-suction to protect the pump system.

Lances:
An optimal cleaning is obtained by using the right lance suitable for the task.

Accessories

Further than the above accessories, Gerni is in position of a comprehensive program of fittings to ease your daily tasks. For further information, please contact your local dealer.

- the choize is yours

Gerni
- danish cleaning power

G9 series - is also produced as a fuel driven cold water cleaner

Gerni petrol and diesel high-pressure cleaners are all strong and robust machines, user friendly and well equipped, which makes all kind of cleaning possible, even where power supplies are insufficient or not available.

The G9 series is represented in 3 models driven by petrol or diesel:

- G9P with a 13 hp petrol engine
- G9D diesel model with manual start
- G9DE diesel model with electrical start

The machines are economical in use and equipped with highly reliable engines: The G9P petrol model with an engine from Honda and the diesel models are provided with Yanmar engines.

The machines are in same construction as the rest of the G9 series, but these are mounted with 4 strong rubber wheels and a brake and further it has the possibility of being lifted by crane. Every machine is provided with self-suction, which makes it possible to suck liquid from a tank. Therefore the machines are standard provided with a filter for silt and sand contaminants.

In addition the DE model is provided with an electric start function, therefore satisfying the demands for easy and unproblematic use.

As well electrical models as fuel models, we have provided a program, which is to meet the basic demands, but still there is the possibility of flexibility – it is yours choice.
