

Sarp Hedge trimmers are offered with a choice of either a single or double sided blade configuration, with blade lengths of 23" or 27" plus several important safety features which not only improve user safety, but offer the operator comfort in their use and manoeuvrability.

Fitted with latest Kawasaki TH23 engine, attached to a fully-floating anti-vibration spring system, that gives a very smooth operating feel with very low vibration figures, at the same time maintains the necessary firmness to give the operator full control of the machine.

Double sided machines have a five position turning rear handle which enables complete control and operator comfort. The handle is easily turned with movement of a single lever, this enables the operator to adjust the handle without stopping the engine.

Our full range of Sarp are available online or you can download the Sarp Brochure in pdf format from the [Download Center](#)
