

SCARIFIERS

Scarifiers

The Power-Mec scarifiers are designed for the professional to give top performance and reliable service.

Scarification is the action of removing the thatch layer and debris from the surface of the lawn. Thatch is a build up of dead plant material, grass clippings and moss combining to prevent water, oxygen and nutrients from reaching that vital area, the root zone.

The ST45H is fitted with fixed offset blades for fine turf and over-seeding, whilst the SCF50 has flail action blades for harsher conditions. Both machines are designed to effectively remove thatch and promote healthy growth.

MODEL	ENGINE	WIDTH	BLADES	HANDLES	WHEELS	WEIGHT
ST45H	Honda GC160 5hp	18" / 45cm	1/16" Self Sharpening	Foam Gripped	Steel	58kg
