

The LUX 350N is the floor saw for light repair and maintenance jobs on industrial floors and roads. It is light, compact, easy to handle and fitted with a Honda 5.9 kW petrol engine.

- **CONSTANT CUTTING DEPTH**

The cutting depth adjustment handwheel is fitted with a lock to withstand vibrations and prevent the cutting depth from being changed inadvertently.

- **CONTROL PANEL**

The panel includes the selector for turning the engine on and off, the cutting adjustment handwheel and the oil level gauge.

- **BLADE GUARD WITH WATER SYSTEM**

The blade guard includes hoses for wetting with water. A continuous flow is needed to cool the blade and prevent the formation of dust that would be harmful for the operator.

- **REMOVABLE AND HEIGHT-ADJUSTABLE HANDLE BAR**

- **OPTIONAL WATER TANK**

The optional 10 litre water tank can be used to wet the blade on road sites or in places where a suitable water supply is not available.

- **PROTECTION BAR**

The steel bar protects the motor and is a convenient lifting point.

- **DRIVE WITH HIGH STRENGTH TOOTHED BELTS**

- **WATER VALVE**

Using the water valve it is possible to connect to the source of water and adjust the flow.

- **HINGED BLADE COVER**

The front of the blade cover can be raised for cutting walls and kerbs.

- **RUBBER WHEELS WITH BALL BEARINGS**

The rubber wheels with special ball bearings prevent sideways movement which would adversely affect the blade and cutting quality.

- **BLADE AND TOOL KIT HOLDER**

The tool kit holder also adjust the blade during transport.

- **EASIER MAINTENANCE**

The engine oil drain tube is on the outside to simplify routine maintenance operations.
